

Demographic Information:

Persona Name: Oliver Vance

Age: 31

Location: Austin, Texas

Occupation: Senior Software Engineer at a mid-sized tech startup

Income:\$115,000/year

Relationship Status: Single, lives alone

User Journey Map

| Phase | 1. Trigger | 2. Friction | 3. Drop-off | 4. Outcome |

Action: Finishes work tired; wants a healthy dinner. Checks fridge; missing key ingredients. | Gives up; opens a food delivery app. | Orders fast food; feels guilty and bloated. |

Emotion: Hungry & Determined | Frustrated & Lazy | Resigned & Indulgent | Guilty & Sluggish |
[Opportunity] | NutriRoute: sends an automated afternoon recipe alert. | NutriRoute: auto-delivers missing groceries in advance. | One-click :15-minute recipe guide:bypasses delivery apps. | Oliver eats healthy; macros auto-sync to his fitness tracker. |

Behavior and Preference

.Tech Savvy: Uses iOS, relies heavily on automation (smart home devices, auto-pay bills).

.Food Habits: Orders delivery apps 4-5 times a week; buys groceries on Sundays but forgets to cook them.

.Media Consumption: Uses Reddit for fitness advice; tracks workouts on Notion.

Goals and Objectives

Healthy Eating:Eat nutrient-dense, home-cooked meals at least 5 days a week.

Fitness Alignment: Gain muscle mass by hitting specific daily macronutrient targets (high protein).

Efficiency: Minimize the time spent thinking about, shopping for, and prepping food.

Challenges and Pain Points

.Lack of Time: Works 50+ hours a week; finishes work too exhausted to chop vegetables and cook complex recipes.

.Subscription Fatigue:Sick of meal-kit deliveries that leave him with massive cardboard boxes and repetitive recipes.

.Macro Tracking Friction: Hates manually inputting every ingredient into fitness tracking apps.

Psychographic Information

.Interests: Weightlifting, tech podcasts, hiking, trying local craft beers.

.Choices: Values efficiency and optimization over cost; willing to pay a premium for convenience.

.Personality Traits:Analytical, structured at work but disorganized at home, health-conscious but easily fatigued by domestic chores.

Task 3: Storyboard – FitFlow AI Fitness App

1. Problem: Aarav is a busy software engineer struggling to fit exercise into his chaotic schedule.

2. Discovery: Aarav stumbles upon the FitFlow app on social media and downloads it to try.

3. Onboarding: He creates a profile, selects "Busy Professional" mode, and gets a tailored quick workout.

4. Daily Usage: Aarav follows the guided, time-efficient home workout before starting his workday.

5. Progress & Motivation: Smart analytics and rewards celebrate his consistency, fueling continued success.

6. Happy Outcome: Healthy habits transform his life, leading to peak energy and productivity at work.

Product: Fitness Tracking Mobile App

Key Features

- Activity tracking (steps, distance, calories burned)
- Workout monitoring
- Sleep tracking
- Goal setting
- Progress reports and analytics
- Health reminders and notifications
- Achievement badges and rewards
- Social sharing and challenges

Persona Name
Nikhil Mishra
Demographic Information
Age: 24 Years
Gender: Male
Occupation: MBA Student
Location: Greater Noida, India
Education: Postgraduate (MBA)
Income: ₹15,000–₹25,000 per month
(stipend/part-time earnings)
Technology Usage: High

Goals & Objectives
Primary Goals
• Maintain a healthy lifestyle despite a busy academic schedule.
• Track daily workouts, calories, and sleep patterns.
• Improve physical fitness and mental wellness.
• Stay motivated through rewards and challenges.
Key Objectives
• Exercise at least 5 days a week.
• Reduce stress and screen fatigue.
• Follow a balanced diet.
• Achieve fitness milestones consistently.

Psychographic Information
Interests
• Fitness and Wellness
• Technology
• Sports
• Personal Development
• Mobile Applications
Personality Traits
• Goal-Oriented
• Competitive
• Tech-Savvy
• Self-Motivated
• Health Conscious
Choices
• Prefers digital solutions.
• Likes personalized recommendations.
• Enjoys reward-based systems.

Challenges & Pain Points
Challenges
• Busy academic and personal schedule.
• Difficulty maintaining workout consistency.
• Lack of personalized fitness guidance.
Pain Points
• Forgetting workout sessions.
• Losing motivation after a few weeks.
• Complex fitness apps with too many features.
• Difficulty tracking progress effectively.

Behavior & Preferences
Behavior:
• Uses smartphone frequently.
• Tracks activities digitally.
• Researches products before adoption.
• Engages with fitness content on social media.
Preferences
• Simple and intuitive UI.
• Personalized workout plans.
• Push notifications and reminders.
• Progress reports and achievement badges.

User Journey
Awareness
Discovers FitTrack through social media advertisements and fitness influencers.
Consideration
Reads reviews, explores app features, and compares alternatives.
Onboarding
Downloads app, creates profile, enters fitness goals.
Usage
Tracks workouts, calories, sleep, and receives AI recommendations.
Engagement
Participates in challenges and earns rewards.
Retention
Continues using the app due to visible progress and motivation.

FITTRACK SOLUTIONS: AI-Driven Recommendations, Progress Tracking, Smart Reminders, Gamified Rewards, Simple & Engaging UI.

WATERFALL MODEL
Product: **FitTrack – AI-Powered Fitness & Wellness Mobile Application**

1. Identify problems faced by users in maintaining fitness and wellness.
2. Conduct surveys and interviews with students and working professionals.
3. Analyze competitor fitness applications and market trends.
4. Gather requirements such as workout tracking, calorie monitoring, sleep tracking, AI recommendations, reminders, and rewards.

1. Design the application architecture and database structure.
2. Create wireframes and UI/UX designs.
3. Design user dashboards, fitness reports, and progress tracking screens.
4. Plan AI recommendation and notification systems.

1. Develop user registration and profile management modules.
2. Implement workout, calorie, and sleep tracking features.
3. Develop AI-based recommendation engine.
4. Integrate notification, reward, and gamification features.
5. Connect wearable device and smartwatch integrations.

1. Test all fitness tracking features for accuracy.
2. Verify AI recommendations and personalized plans.
3. Conduct usability and performance testing.
4. Fix bugs and validate system functionality.
5. Ensure data privacy and security compliance.

1. Launch the application on Google Play Store and Apple App Store.
2. Deploy cloud database and backend services.
3. Run marketing campaigns through social media and influencers.
4. Provide user onboarding and setup guides.

1. Monitor app performance and user feedback.
2. Release regular updates and bug fixes.
3. Improve AI recommendations based on user data.
4. Add new fitness challenges, rewards, and wellness features.
5. Ensure long-term security and compatibility updates
